# **WEATHER OF CONCERN**

## **Weather of Concern**

- The first rain of the season is expected over recently burned areas. This can cause ash and debris flow, clogging culverts, and leading to localized flooding.
- A storm system over Western Canada will move south over the West Coast this weekend, with the potential to bring widespread rainfall to Southwest California.
- Potential impacts will include travel delays with slippery roads due to accumulated oil and weekend activities possibly being affected. In addition, localized minor street flooding may occur due to blocked drains.

## **Active Weather Warnings, Watches and Advisories by County:**

- <https://alerts-v2.weather.gov/counties/CA>

# **WEATHER SYNOPSIS BY REGION**

## **NORTHERN CALIFORNIA**

Cooler weather with high temperatures ranging from the mid 60s to upper 70s. Winds 5 to 15 mph.

The weather pattern will gradually turn more moist and cooler during the next several days. High pressure will loosen its grip over the area and give way to a series of Pacific storm systems and a more persistent, moist onshore flow. Winds will continue to increase and turn more S to SW Thursday and Friday. Gusts between 25 to 35 mph with locally up to 45 mph will be possible across the Sacramento Valley and eastern areas on Friday. Precipitation, initially light, will start along coastal areas Thursday and spread eastward Thursday night into Friday. The bulk of the precipitation will occur later Friday into Saturday due to the cold frontal passage. The Lake Tahoe, Northwest mountain and North Coast areas are expected to be favored with the most liquid water from the system. Liquid water amounts up to around 2.0 inches will be possible. Snow accumulation levels will drop to around 4500 feet on Saturday. Unsettled weather will continue Sunday into the earlier half of next week with additional Pacific trough passages. Cooler and fairly moist conditions will prevail.

## **SOUTHERN CALIFORNIA**

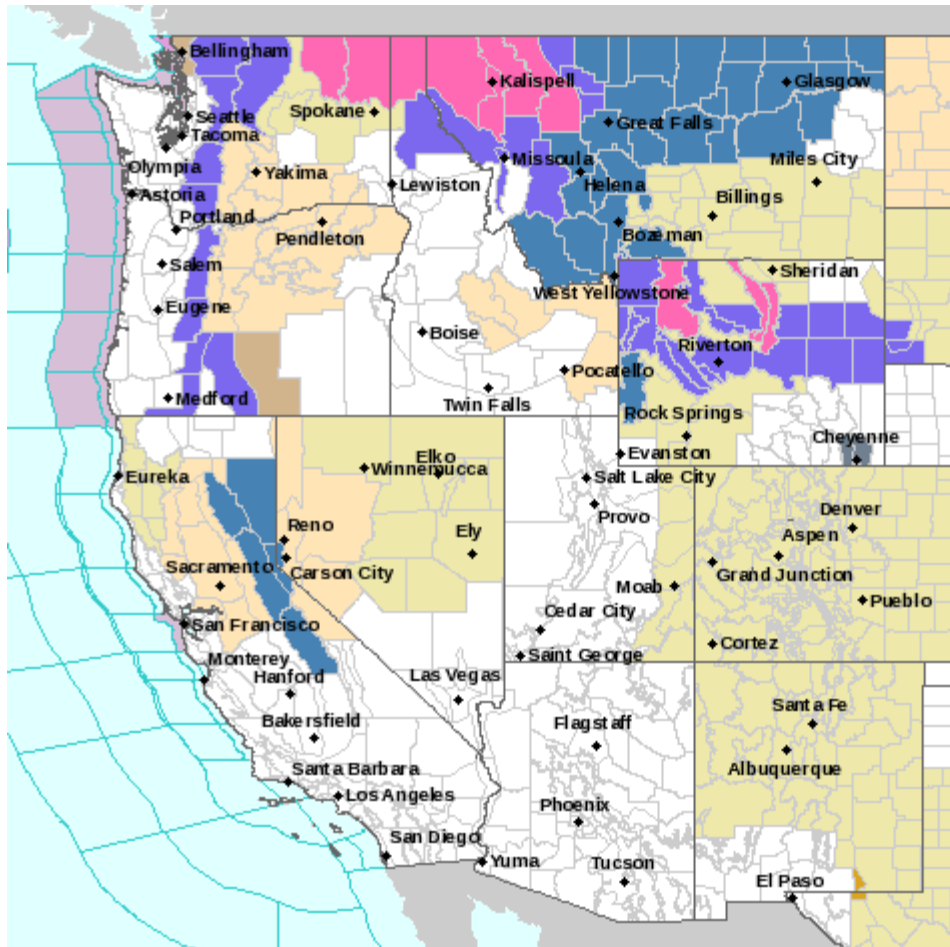

Cooler weather with high temperatures ranging from the mid 60s to upper 70s with 80s in desert areas. Winds 10 to 20 mph with gusts to 30 mph for mountain and desert locations.

\*\*\*Wetting rain likely for portions of Central California this weekend\*\*\*

Temperatures will remain 3-5 degrees below normal with highs in the 60s along the coast to the 70s in the valleys. Clouds may increase again Thursday in advance of a deep trough which is expected to develop over the Pacific Northwest late this week. This trough will usher a pair of storm systems into the state over the weekend into early next week which will lead to a good chance of wetting rains over most of Central and Northern California. The first storm will reach Northern California Friday with rain spreading southward into Central Coast and Sierras late Friday night into Saturday. Rainfall will slowly decrease Saturday afternoon and evening over Central California, but some upslope flow may allow showers to continue in the Sierras Saturday night into Sunday. Only patchy drizzle is expected over Southern California Saturday. A second, more powerful, storm now looks to arrive Sunday night into Monday. This second storm may have more of a subtropical connection which may enhance precipitation in the Sierras and may also result in some light precipitation over Southern California, mainly during the day Monday. In all, the central coast and Sierras may receive over an inch of rainfall from the two storms with under a quarter of an inch expected over the southern part of the state. Snow levels will drop to 7,000 feet with the first storm, but may rise Sunday into Monday. After a sunny, warmer day Tuesday, another storm may arrive next Wednesday or Wednesday night. No offshore winds are expected through the period.
